

Hi,

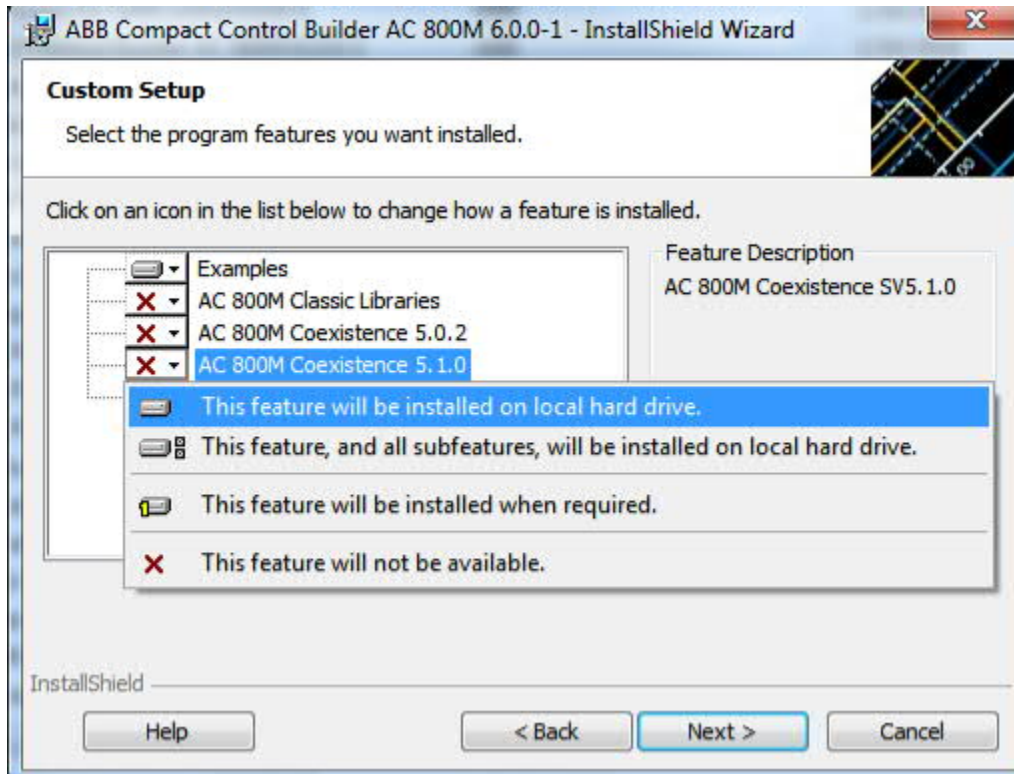

The Backup of your project is from 800xA5.1 Rev C , this version is having BasicHardwareLib-5-1-0.hwl, if you try to import in 800xA 6.0.X version it will give the error as per your screen shot.

I had checked the same getting same error when I tried to open the project created in CCB of 800xA5.1 Rev C in 800xa 6.0.0-1

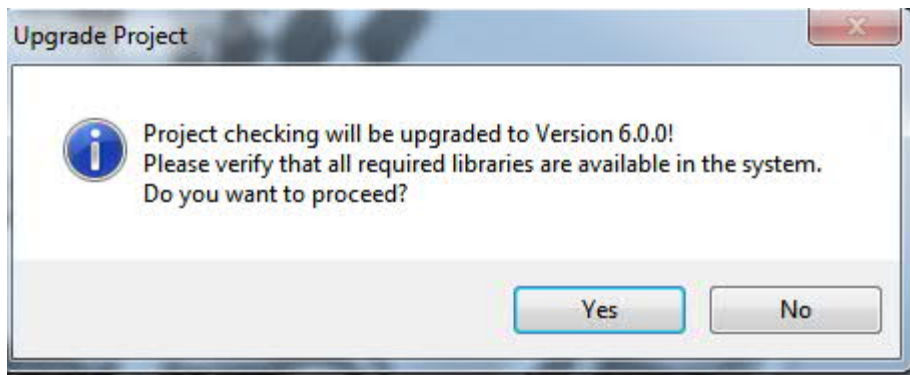

As per mpetter78, you can change the installation of compact control builder in the control panel and select "Modify"

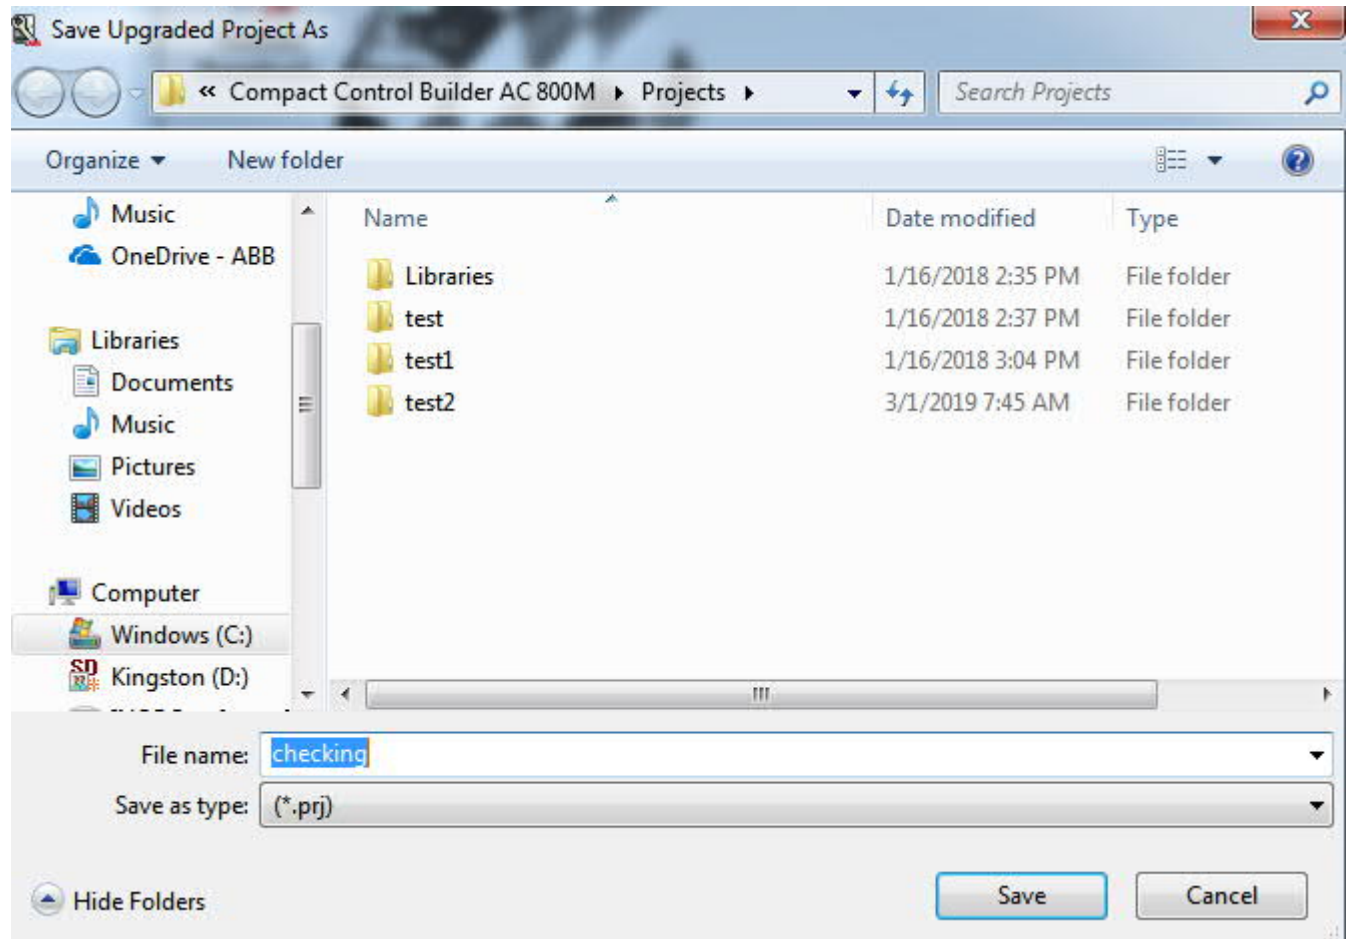

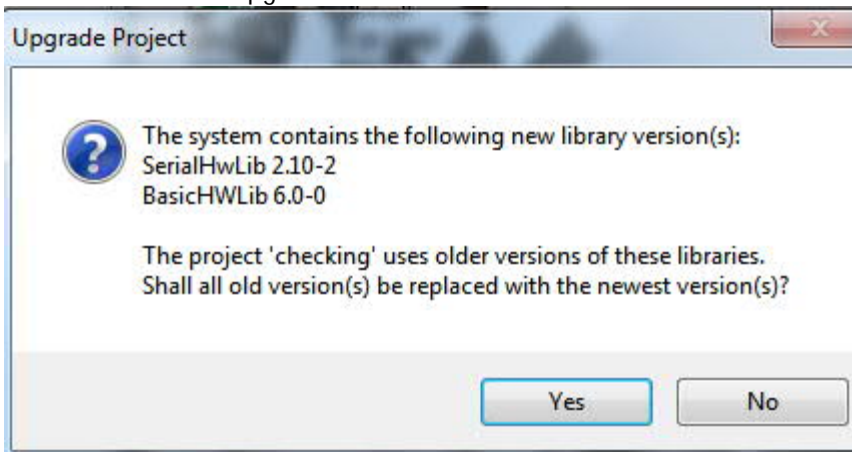

After opening the project, it will ask for upgrade

Automatic pop-up for saving the project

Hardware libraries upgrade

Once upgraded Hardware libraries will get changed and shows upgrade project finished
